

SpotOn® Compaction Meter

FOR IMMEDIATE RELEASE: April 5, 2017

The SpotOn® Soil Compaction Meter Assures Automatic, Accurate Digital Readings

(Woodstock, Ill.) [Innoquest, Inc.](#), the designer and manufacturer of sensors and measurement instruments, has released the **Digital SpotOn® Soil Compaction Meter**. Created for farmers and agronomists, the new digital meter automatically displays the maximum compaction value and offers a range of 0 to 825 PSI.

“The **SpotOn® Soil Compaction Meter** is easy to use, displaying measurements as soon as the probe is extracted from the soil,” [Bill Hughes](#), President of Innoquest, said. “It also has a rugged design and rubber protector for repeated use in the field.”

Measurements are recorded in PSI or kPA, showing compaction severity with a green, yellow or red code. The digital meter accurately measures soil compaction within 15 PSI and has a usable probe length of 30 inches. The digital meter is waterproof and can be shipped anywhere in the world – because it’s digital, cabin pressure will not affect it.

The **SpotOn® Soil Compaction Meter** features an ultra-hard tool steel cone that lasts for years. Its electronic force sensor eliminates changing the cone size to improve resolution and assures accurate compaction values even in soft soils. In addition, the stainless steel shaft is marked every 4 inches for easy depth reference.

Made in the U.S.A., the **SpotOn® Digital Soil Compaction Meter** meets the industry’s standard for the shape and size of the cone and shaft as set by the American Society of Agricultural and Biological Engineers ([ASABE S313.3 Soil Compaction Standard](#)). The digital meter lists for \$395 and has a one-year warranty. For more details or to find a distributor, call 1 (800) 637-1623 or visit [innoquestinc.com](#).

Innoquest, Inc. has been designing and manufacturing sensors and instruments made in the U.S.A. since 1993.
